

PAPUA NEW GUINEA NATIONAL DEPARTMENT OF HEALTH

PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Full-Scope Platform User Guide

Plain-language guide for staff, registrars, administrators, finance, data quality, and document repository users.

Generated: 1 June 2026

OpenKM Timeline Implementation Check

Implementation Audit Against OpenKM Timeline

Timeline area	Status	Where implemented
Phase 1 Repository Foundation	Completed and integrated	apps.documents models, admin, URLs, staff screens, bootstrap_document_repository, 24 folders.
Phase 2 OCR/Search/Duplicate	Completed and integrated	DocumentVersion extracted text, OCR linkage, reference extraction, repository search, checksum duplicate grouping.
Phase 3 Workflow/Staff Review	Completed and integrated	Nursing Council workflow config, checklist review, linked repository evidence, inbox, notifications, read/opened status, access requests, ICMS, discipline, and decisions.
Phase 4 Governance/Security	Completed and integrated	System Admin-only admin, office scope separation, finance separation, public-safe register, audit events, controlled role/cadre registration, document sign-off, and scoped case access.
Phase 5 Documentation/Training	Completed	Updated manuals, cleansing guide, OpenKM guide, ICMS/discipline guidance, project timeline, update brief, and generated PDF handover guides.

Plain-language conclusion: the OpenKM-style and ICMS/discipline functions are integrated into the platform. The remaining work is operational adoption: staff must scan paper records, upload evidence, tag metadata, approve or reject controlled versions, link documents to applications, practitioners, complaints, discipline cases, and decisions, and keep data-quality review active.

Plain Language Staff Guide

How Staff Use The Platform In Plain Language

Staff group	What to do
System Admin	Set up users, repository folders, access rules, NHWA/map/forum/FAQ bootstraps, backups, and production settings.
Registrar	Review applications, open linked evidence, verify checklist/payment/competency, approve or reject, manage ICMS/discipline/decision workflows, use Records Hub and duplicate-review tools, and generate reports.
Reviewer	Request operational access first. After approval, help review assigned records, cases, and evidence only within scope.
Data Quality Officer	Review active analytics snapshots, missing data, duplicate queue cases, source rows, receipt-owner matches, mapped references, and repository evidence before reports are published.
Finance Officer	Use separated Nursing Council and Medical Board financial forecast pages and assigned receipt review. Do not edit records or mix office figures.
Professional / Applicant	Use own portal, own applications, own receipts, and public-safe forms. Cannot view other people's private records.

For documents: open Document Repository, upload the scanned evidence, choose the right office scope, add metadata, link it to the application, practitioner, complaint, discipline case, decision, receipt, or source row, run OCR if needed, approve or reject controlled versions, and use the audit trail to prove who viewed, uploaded, downloaded, approved, rejected, or changed the record.

Current Platform Update Brief

Platform Update Brief

Project: PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Updated: 1 June 2026

Audience: System Admin, Nursing Council Registrar, Medical Board Registrar, reviewers, data-quality officers, finance users, support staff, and project handover leads.

1. Purpose

This brief records the current platform position after the May/June 2026 interface, Nursing Council analytics snapshot, Catherine workbook refresh, receipt-linking, ICMS, discipline, decision-register, NHWA, mapping, notification, registration, records, duplicate-review, and dashboard access updates.

Use this brief together with the main user guide, deployment checklist, data-cleansing plan, and government launch package.

2. Current Live Snapshot

Local database snapshot checked on 1 June 2026. Nursing Council analytics totals come from the active cleansed workbook snapshot and remain separate from legal registry person tables.

Area	Count
Nursing Council analytics lifecycle records	34,851
Clean ATP records	19,998
Clean provisional records	8,158
Clean full-licence records	6,695
Estimated practitioner match groups	22,765
Data quality health score	87.0%
Registered Nurses / Midwives / Nurse Aides / Health Students in live person tables	0
Community Health Workers	11,594
Medical Doctors	327
Applications	0
Imported licence/history rows	53,178
Receipts	11,501
Receipt amount recorded	PGK 822,882.30
Missing-data review items	57,129
Pending missing-data reviews	0
Duplicate-review items	177
Pending duplicate-review items	177
Qualification records	11,863
Repository folders	24
Repository documents	0
Mapped entity references	1,462
Geocoded mapped entities	0
Public FAQ entries	5

Area	Count
Formal ICMS complaint cases	0
Disciplinary cases	0
Regulatory decision records	0

These figures are live local counts and will change as staff import, cleanse, merge, approve, and update records.

Latest completed import:

Source file	Source kind	Processed / total rows	Completed
PNG_Nursing_Council_Cleaned_Licence_Breakdown.xlsx + PNG_Nursing_Council_Cadre_Breakdown.xlsx	nursing_catherine_licence_breakdown	14,853 / 18,615	29 May 2026 01:00 UTC

3. Current Interface Updates

- Authenticated dashboards now use board-specific welcome headers:
 - Nursing Council users see Welcome To Your PNG Nursing Council Online Platform Dashboard.
 - Medical Board users see Welcome To Your Medical Board Online Platform Dashboard.
- The Papua New Guinea national emblem is used in the authenticated dashboard header and public registration guide areas.
- The public registration page includes an emblem background and a controlled Cadre dropdown instead of a free-text cadre field.
- The Cadre dropdown distinguishes CHW pathways:
 - Medical Board - CHW Provisional Registration.
 - Medical Board - CHW Full License.
- Other cadre/specialty options are labelled by board and registration pathway so applicants choose the correct record track.
- The sign-in button text contrast has been corrected for visibility.
- Standards and Compliance duplicate header content has been removed.

4. Notifications, Inbox, And Message Read Status

The notification bell now supports staff-style notification behaviour:

- The bell shows unread notification/message count when messages are sent.
- Opening notification history or the related inbox thread marks the relevant notification as read.
- After the message or notification has been viewed, the bell count clears.
- Registrar and admin users can view notification history.
- Applicant/professional users can view their own notification history and mailbox status.
- When a registrar opens a message from an applicant or professional, the sender's sent/inbox view reflects that the message was opened/read.
- Mailbox folders include Inbox, Sent Items, Archived, Deleted Items, Conversation History, and Notes.

5. Records Hub Update

The Nursing Professionals page in the Records Hub now includes registrar-facing table functions:

- Search.
- Sort.
- Page length selection.
- Pagination.
- View action.
- Edit action.
- Add New action where the role is authorised.

Records Hub remains a controlled staff tool. Staff should use it for structured record maintenance and corrections, not as a replacement for registrar decision workflows where an application approval process exists.

6. Duplicate Review Queue Update

The Duplicate Review Queue now includes table functions:

- Search duplicate queue.
- Sort columns.
- Page length selection.
- Full-number pagination.
- Horizontal table support for narrow screens.
- Grouped source rows visible inside each review row.
- Action buttons for Mark Reviewed, Mark Merged, and Reopen.

The queue should be used before publishing management figures where duplicate candidates may affect live people counts.

7. Financial Forecast Access Update

Financial forecast access remains separated by office scope:

- Nursing Council finance: `/dashboard/reports/financial/?office=nursing`
- Medical Board finance: `/dashboard/reports/financial/?office=medical`

Operations-approved reviewer/data-quality roles can open the financial forecast where their role and office-scope permissions allow it. Finance users remain read-only and cannot perform registry CRUD, imports, registrar approvals, or admin-console work.

8. Nursing Council Analytics Snapshot

The Nursing Council dashboard now reads the active cleansed analytics snapshot before falling back to live aggregation. This gives dashboard users accurate workbook-aligned analytics without treating workbook rows as legal registry records.

Snapshot rules:

- Active source: `PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx`.
- Generated date: 27 May 2026.
- Active KPIs: 34,851 lifecycle records, 19,998 clean ATP, 8,158 clean provisional, 6,695 clean full licence, 87.0% data quality health score.
- Drilldowns are server-side and include Open links for authorised staff.
- `Person_Group_Key` is an analytics grouping key only.
- Catherine workbook imports are aligned into analytics/import tables and do not overwrite legal person records automatically.

9. ICMS, Discipline, Decisions, Documents, NHWA, And Mapping

New operational modules:

- /dashboard/complaints/ for formal ICMS complaint, incident, and enquiry cases.
- /dashboard/complaints/discipline/ for disciplinary case stages, events, attachments, and complaint escalation.
- /dashboard/complaints/decisions/ for formal regulatory decision records with rationale, authority/SOP reference, evidence summary, conditions, appeal rights, and dates.
- Repository document detail now supports current-version approval/rejection with audit history.
- /dashboard/nhwa-workbooks/ supports NHWA workbook review as a reporting layer.
- /dashboard/public/faqs/, /dashboard/public/forum/, and /dashboard/public/map/ support public guidance, moderated discussions, and mapped reference records.

The map reads stored coordinates only. Use `geocode_mapped_entities --limit 100` or verified admin entry before public map demonstrations.

10. Receipt Linking

Receipt-owner matching links receipts only where evidence is strong. Unmatched, duplicate, suspicious, or high-value receipts should be reviewed immediately. Receipts remain finance evidence and must not be counted as practitioners.

11. Current Smoke-Test Priority

Before handover or demonstration, smoke-test these routes:

Route	What to confirm
/accounts/	Emblem background, visible sign-in button, role and cadre dropdowns.
/accounts/login/	Login and forgotten-password flow.
/dashboard/	Role-based redirect.
/dashboard/nursing-council/	Nursing Council welcome header and emblem.
/dashboard/medical-board/	Medical Board welcome header and emblem.
/records/nursingprofessional/	Records Hub DataTables functions and CRUD action visibility.
/dashboard/duplicate-reviews/	Duplicate queue search, sort, page length, pagination, and action buttons.
/dashboard/reports/financial/	Financial forecast loads for authorised users and respects scope.
/dashboard/nursing-council/analytics/summary/	Active snapshot summary returns current KPIs.
/dashboard/nursing-council/analytics/drilldown/	Server-side facts return with filters and Open actions.
/dashboard/complaints/	ICMS register loads for authorised staff.
/dashboard/complaints/discipline/	Discipline register loads for authorised staff.
/dashboard/complaints/decisions/	Decision register loads for authorised staff.
/dashboard/public/faqs/	Public FAQ page loads.
/dashboard/public/forum/	Forum page loads and respects moderation/visibility.
/dashboard/public/map/	Map page loads from stored mapped entities.
/dashboard/nhwa-workbooks/	NHWA workbook centre loads for authorised staff.
/notifications/communications/	Inbox folders, unread badges, read/opened status, and notification history.
/dashboard/standards-alignment/	Standards and Compliance displays once without repeated header content.

12. Documentation Regeneration Note

Markdown source documents have been updated for the current operating position. Generated PDF and Word outputs should be regenerated from the current source before formal external circulation so screenshots, counts, and generated timestamps match the live platform.

Main User Manual

Full Platform User Guide

Project: PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Last updated: 1 June 2026

1. Operating Principle

The platform is a controlled regulatory operations system, not a spreadsheet viewer.

Core rules:

- Nursing Council and Medical Board data stay separated by role and office scope.
- Imported workbook rows are staged and analysed before they become legal registry records.
- The Nursing Council analytics dashboard reads from the active cleansed snapshot first.
- Person_Group_Key is an analytics grouping key only. It is not a legal practitioner identity.
- NHWA workbooks are reporting outputs populated from verified platform data. They do not write back into the legal registry automatically.
- Receipts are financial evidence. They are not practitioner records.
- Formal complaints, discipline, and decision records must keep evidence, rationale, authority references, and audit history.

2. Key Areas

Area	URL	Use
Main dashboard	/dashboard/	Role-based landing page
Nursing Council portal	/dashboard/nursing-council/	Nursing Council analytics, workflow, data quality, and operations
Medical Board portal	/dashboard/medical-board/	Medical Board workspace
Financial forecast	/dashboard/reports/financial/?office=nursing	Nursing Council receipt and forecast reporting
ICMS complaints	/dashboard/complaints/	Formal complaint, incident, and enquiry case management
Discipline	/dashboard/complaints/discipline/	Disciplinary case workflow
Decisions	/dashboard/complaints/decisions/	Formal regulatory decision register
Document repository	/documents/search/	Official evidence, versions, metadata, search, and approval sign-off
NHWA workbooks	/dashboard/nhwa-workbooks/	Standards/reporting workbook layer
Public FAQs	/dashboard/public/faqs/	Public guidance
Forum	/dashboard/public/forum/	Moderated public, practitioner, and staff discussions
Map	/dashboard/public/map/	Schools, institutions, and facilities using stored coordinates
Records Hub	/records/	Staff record maintenance where authorised

3. Nursing Council Analytics

The active snapshot is PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx, generated on 27 May 2026.

Metric	Current value
Total lifecycle records	34,851
Clean ATP records	19,998
Clean provisional records	8,158
Clean full-licence records	6,695
Estimated practitioner match groups	22,765
Data quality health score	87.0%

Use the dashboard charts for analytics and the drilldown/Open buttons for record inspection. Treat analytics records as snapshot evidence until an authorised promotion or live workflow creates the legal record.

4. Complaints, Discipline, and Decisions

Public and staff complaints enter the ICMS register. Staff can create cases from the complaints screen or escalate an enquiry thread using the Open ICMS Case action.

Workflow:

```

Complaint or enquiry
-> ICMS case
-> triage and assignment
-> investigation notes and attachments
-> resolution or escalation
-> discipline case where required
-> formal regulatory decision

```

Disciplinary cases track stages from intake through assessment, investigation, committee review, hearing, decision, appeal/monitoring, and closure.

The regulatory decision register should be used for decisions that must be defensible later. Record the decision, rationale, authority or SOP reference, evidence summary, conditions, appeal rights, decision maker, and effective dates.

5. Document Repository

Use the repository for scanned application forms, receipts, qualifications, correspondence, source workbooks, investigation evidence, and signed outputs.

Required practice:

- Select the correct office scope.
- Add document type, title, metadata, and linked record where possible.
- Upload corrected files as new versions, not silent replacements.
- Approve or reject the current version when it becomes an official controlled document.
- Use audit history to confirm who uploaded, viewed, downloaded, approved, rejected, or changed a document.

6. Receipts

Receipt linking attempts to match recent payments to applications, practitioner records, analytics facts, or source rows using evidence such as receipt number, name, registration number, practitioner number, source row, amount, and date.

Rules:

- Accept only high-confidence matches.
- Do not attach a receipt to a person based only on a weak name match.
- Place unlinked, duplicate, suspicious, or high-value receipts into review.
- Keep Nursing Council and Medical Board receipt reporting separate.

7. Public, Applicant, and Practitioner Views

Public users can search public-safe register information, submit forms, read FAQs, submit moderated complaints, and view public map references.

Applicants and practitioners can use their own dashboards, applications, receipts, messages, and notification history. They cannot view other practitioners' private records.

Forum visibility is role-based:

- Public Questions are moderated before display.
- Registered Nurses, Provisional Licence, Full-Licence Applicant, and ATP Renewal forums require login and the matching user/stage.
- Staff forums are internal only.

8. Mapping

The map displays schools, institutions, and facilities from MappedEntity records.

Important rule: the page reads stored coordinates. It must not geocode every page load. Use `geocode_mapped_entities --limit 100` or verified admin entry to add coordinates.

Filters support board, type, province, cadre, and workforce count where the source data is available.

9. NHWA Toolkit

The NHWA toolkit is a standards/reporting layer:

```
Registry / Analytics / Finance / Facilities
-> NHWA workbook cells
-> review and sign-off
-> NHWA export/report
```

Do not use NHWA workbook values to overwrite registry records. Uncertain cells remain editable with audit and sign-off control.

10. Staff Role Summary

Role	Main responsibilities
System Admin	Users, roles, MFA, migrations, bootstraps, maps, NHWA setup, backups, and secure admin
Registrar	Regulatory decisions, applications, ICMS oversight, discipline, reports, and final sign-off
Data Quality Officer	Snapshot review, missing data, duplicate review, import QA, receipt matching, and reference cleanup
Finance Officer	Read-only financial forecast, receipts, and exports by office scope
Reviewer	Assigned reviews after operational access approval
Public/applicant support	Help with forms, FAQs, public forum moderation path, and status guidance

11. Commands

```
.\venv\Scripts\python.exe manage.py migrate
.\venv\Scripts\python.exe manage.py bootstrap_document_repository
.\venv\Scripts\python.exe manage.py bootstrap_nursing_council_workflows
.\venv\Scripts\python.exe manage.py bootstrap_nhwa_workbooks
.\venv\Scripts\python.exe manage.py seed_engagement_platform
.\venv\Scripts\python.exe manage.py import_nursing_analytics_snapshot --path
"path\to\PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx" --activate
.\venv\Scripts\python.exe manage.py import_nursing_catherine_licence_breakdown --licence-path
"path\to\PNG_Nursing_Council_Cleaned_Licence_Breakdown.xlsx" --cadre-path
```

```
"path\to\PNG_Nursing_Council_Cadre_Breakdown.xlsx"  
.\.venv\Scripts\python.exe manage.py link_receipts_to_individual_records --review-unmatched  
.\.venv\Scripts\python.exe manage.py geocode_mapped_entities --limit 100  
.\.venv\Scripts\python.exe manage.py check
```

OpenKM-Style Document Repository Guide

OpenKM Comparison And Completed Platform Roadmap

Project: PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Date: Updated 1 June 2026

1. Purpose

This document explains how the platform now aligns with OpenKM-style document management and records management functions.

OpenKM is a document management system. Our platform is not being turned into a separate OpenKM server. Instead, the useful OpenKM concepts have been integrated into the current regulatory platform so documents, applications, practitioners, receipts, complaints, disciplinary cases, regulatory decisions, workflows, reports, and data-quality issues remain in one controlled system.

2. Implementation Principle

The platform uses OpenKM-style functions as system configuration and workflow support, not as a static file-download area.

The intended operating model is:

```
Document or source record
-> office scope
-> metadata
-> version/evidence
-> search/OCR text
-> access control
-> linked practitioner/application/receipt
-> linked complaint/discipline/decision where relevant
-> approval or rejection sign-off
-> review workflow
-> audit event
-> dashboard/report output
```

3. Current OpenKM-Style Capabilities

OpenKM capability	Current platform implementation	Status
Central repository	apps . documents with repository folders, staff upload, detail, metadata, versions, and download.	Integrated
Office-scoped folders	General Registry, Nursing Council Repository, Medical Board Repository.	Implemented
Document metadata	Document . metadata stores structured metadata.	Implemented
Version control	DocumentVersion stores version number, current version, original filename, file size, checksum, and notes.	Implemented
OCR/search text	DocumentVersion . extracted_text and OCR support allow searchable text to be stored and searched.	Integrated
Duplicate document detection	File checksum comparison identifies duplicate uploaded files.	Integrated
Access policies	DocumentAccessPolicy supports user/role-level view, download, upload, metadata edit, and permission management flags.	Integrated

OpenKM capability	Current platform implementation	Status
Audit events	DocumentAuditEvent tracks document actions such as created, uploaded, approved, rejected, viewed, downloaded, metadata updated, linked, OCR processed, and access denied.	Integrated
Approval sign-off	DocumentApproval records approval or rejection of controlled current versions with approver, timestamp, version, and note.	Implemented
Repository search	/documents/search/ searches title, description, metadata, filenames, and extracted text with office-scope filtering.	Implemented
Role and privacy separation	Nursing Council, Medical Board, finance, reviewer, and admin access checks are enforced by backend role rules.	Implemented
Application workflow	Nursing Council pathway and checklist services connect applications, documents, payment, validation, and approval.	Integrated
Data quality	Missing-data review and Duplicate Review Queue support cleansing before reporting. Duplicate Review Queue includes search, sort, page length, full pagination, grouped source rows, and review actions.	Implemented
Records Hub	Authorised staff can inspect core registry records and administrative data. Nursing Professionals includes registrar table functions and CRUD actions where authorised.	Implemented
Staff inbox/chat	Notifications, notification history, unread badge clearing, read/opened message status, enquiries, and operational access requests support review and collaboration.	Implemented
Financial records	Manual receipts and spreadsheet receipts are separated by office scope and reported through finance pages.	Implemented
ICMS case records	Formal complaint, incident, and enquiry cases track triage, assignment, status, events, attachments, risk, and closure.	Implemented
Discipline case records	Disciplinary cases track stages, events, attachments, and escalation from complaint cases.	Implemented
Regulatory decision records	Formal decision records capture rationale, authority/SOP reference, evidence summary, conditions, appeal rights, maker, and dates.	Implemented

4. Comparison With OpenKM

Document Management

OpenKM provides central storage, metadata, versioning, relationships, OCR, and security.

Current platform alignment:

- Repository folder structure exists.
- Staff-facing upload and detail screens exist.
- Staff-facing metadata update, version upload, and audited download exist.
- Documents can be scoped to Nursing Council, Medical Board, or General Registry.

- Metadata can be stored on each document.
- File versions can be stored.
- Current version can be tracked.
- Current versions can be approved or rejected with notes and audit history.
- Checksums support duplicate document detection.
- OCR/extracted text can be searched.
- Role and office separation is enforced.

Remaining operational step:

- Legacy paper evidence still needs to be scanned and uploaded. The repository is ready, but historical documents are not yet fully attached to legacy practitioner records.

Records Management

OpenKM provides classification, retention, official record declaration, archive rules, and disposal controls.

Current platform alignment:

- Documents can be marked as official records using `is_record`.
- Retention years can be stored.
- Status values include draft, active, archived, and superseded.
- Audit events create traceability.
- Practitioner/application/payment history remains available in structured tables.

Remaining operational step:

- NDOH must approve formal retention schedules and disposal rules before automated disposal can be used.

Workflows and Automation

OpenKM provides routing, approvals, task queues, and workflow monitoring.

Current platform alignment:

- Nursing Council pathways are configured for applications and form rules.
- Checklist/document requirements can be generated by pathway.
- Payment gating and registrar approval rules exist.
- Staff inbox supports enquiries, notifications, and operational access requests.
- Notification history and mailbox read/opened status support auditable follow-up when evidence or corrections are requested.
- Registrar dashboards show operational statistics and review areas.

Remaining operational step:

- Full SLA escalation and visual workflow designer are not required for launch, but can be added after users start operating the platform.

Collaboration

OpenKM provides discussion, annotations, and shared review.

Current platform alignment:

- Staff inbox and chat support internal review communication.

- Notifications guide users toward pending actions.
- Application notes, status history, and data-quality notes support traceability.
- ICMS and discipline case events support formal case collaboration.
- Regulatory decision records provide a controlled place for defensible outcomes.

Remaining operational step:

- Document-level comments and inline annotations can be added as a later enhancement if staff need them after launch.

Search and Indexing

OpenKM provides full-text and metadata search.

Current platform alignment:

- Repository search checks document title, description, metadata, filename, and extracted text.
- Records Hub and dashboard search support structured records.
- OCR text can be used for scanned documents.

Remaining operational step:

- Performance tuning may be needed when many scanned documents are uploaded.

Security and Compliance

OpenKM provides permissions, audit trails, and compliance controls.

Current platform alignment:

- System Admin only can access /admin/.
- Reviewers need operational approval before using higher-risk tools.
- Finance Officer has read-only finance/workforce access.
- Nursing Council and Medical Board finance can be viewed separately.
- Public register returns safe public fields only.
- Sensitive actions are linked to user identity and audit/history tables.

Remaining operational step:

- Production hosting, backup policy, retention policy, and security monitoring must be confirmed with NDOH ICT before live public deployment.

5. How OpenKM-Style Features Fit The Platform

Business need	Platform feature
Store scanned paper records	Document repository and professional document/checklist uploads
Find documents later	Repository search and OCR/extracted text
Know if the file changed	Document versions and current-version flag
Stop staff seeing the wrong office records	Office scope and role access checks
Track who handled a file	Document audit events, status history, export timestamps
Approve or reject a controlled file	Document approval records and approved/rejected audit events
Connect documents to a case	Related object links, application checklist records, ICMS cases, discipline cases, and decision records

Business need	Platform feature
Manage complaints and incidents	ICMS cases, events, attachments, risk, priority, and source enquiry links
Manage disciplinary pathways	Disciplinary cases, stages, events, attachments, and complaint escalation
Record defensible decisions	Regulatory decision records with rationale, authority, evidence, conditions, and appeal rights
Review incomplete records	Missing-data review and duplicate-review workflows
Work through duplicate candidates efficiently	Duplicate Review Queue with search, sort, pagination, grouped source rows, and reviewed/merged/reopen actions
Maintain structured records	Records Hub table functions and authorised CRUD actions
Keep official evidence	is_record, status, retention years, and audit history
Support registrar approval	Checklist, payment, competency, declaration, and registrar workflow rules
Support finance transparency	Separate manual receipts, spreadsheet receipts, monthly/yearly totals, and office-scoped exports

6. Completed Roadmap Summary

Phase	Scope	Current status
Phase 1	Repository foundation, office-scoped folders, metadata, versions, permissions, and audit.	Completed and integrated
Phase 2	OCR/search integration, duplicate checksum checks, source import alignment, monthly analytics explanation.	Completed and integrated
Phase 3	Workflow routing through applications, checklists, registrar review, staff inbox, access requests, and reports.	Completed and integrated
Phase 4	Records governance, retention fields, archive/superseded status, privacy separation, finance separation, document sign-off, and audit discipline.	Completed and integrated
Phase 5	User guide, data-cleansing guide, management reporting discipline, ICMS/discipline guidance, and launch governance documentation.	Completed documentation

7. What Must Still Be Done Operationally

The system functions are available, but the data programme must continue:

- Scan and attach legacy paper evidence.
- Populate employment records from renewal and ATP data.
- Resolve missing-data review items.
- Resolve duplicate review candidates.
- Normalize institution and facility reference values.
- Link complaint, discipline, and decision evidence to the correct records.
- Use approval/rejection sign-off for controlled document versions.
- Confirm official retention schedules with NDOH ICT and management.
- Train staff before production launch.

- Change all test passwords before production launch.

8. Conclusion

The OpenKM-style scope has been integrated into the platform as a controlled document and records management layer. The platform now supports repository folders, document metadata, version tracking, approval/rejection sign-off, extracted-text search, checksum duplicate checks, office-scoped access, audit events, workflow support, ICMS and discipline evidence, regulatory decision records, data-quality review, staff collaboration, and separated regulatory body reporting.

The next major gains will come from disciplined use: scanning paper evidence, attaching documents to the correct records, cleaning source data, and ensuring staff follow the workflow instead of bypassing it.

Data Cleansing And Import Alignment

Data Extraction and Population Guide

Project: PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Last updated: 1 June 2026

1. Purpose

This guide explains how source data should be extracted, imported, reviewed, and populated into the current platform without damaging live registry statistics.

The current system supports:

- Nursing Council and Medical Board separated workspaces.
- Reference data setup.
- Bulk spreadsheet imports.
- Nursing Council analytics snapshot imports from the cleansed dashboard workbook.
- Catherine cleaned provisional/full-licence and cadre workbook alignment.
- ATP/N-DATA/Medical Board workbook handling.
- Receipt-owner matching and high-value review routing.
- Missing-data review.
- Duplicate review queue with search, sort, pagination, grouped source rows, and review actions.
- Records Hub review with search, sort, pagination, and authorised CRUD actions.
- OpenKM-style document repository.
- NHWA standards/reporting workbooks.
- Mapped institutions/facilities using locally stored verified coordinates.
- Monthly/yearly reporting.

2. Safe Population Flow

Use this flow for every new data source:

```
Source file or paper record
-> extract/scan
-> import staging or historical rows
-> analytics snapshot table where the source is an analytical workbook
-> validate fields
-> detect duplicates
-> create missing-data review items
-> staff correction
-> registrar approval where required
-> live registry update
-> dashboard/report update
```

Do not import raw files directly into final live counts without validation.

For the Nursing Council analytics workbook, use this separate flow:

```
PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx
-> DataImportBatch provenance
-> NursingAnalyticsSnapshot
-> NursingLifecycleFact and metric tables
-> active snapshot flag
-> dashboard summary and server-side drilldown
```

This flow gives the dashboard accurate analytics from the cleansed workbook but does not create legal practitioner identities. Person_Group_Key remains an analytics grouping key only.

3. Bootstrap Required Reference Data

Run:

```
.\.venv\Scripts\python.exe manage.py bootstrap_reference_data
.\.venv\Scripts\python.exe manage.py bootstrap_document_repository
.\.venv\Scripts\python.exe manage.py bootstrap_nursing_council_workflows
.\.venv\Scripts\python.exe manage.py bootstrap_nhwa_workbooks
.\.venv\Scripts\python.exe manage.py seed_engagement_platform
```

These commands prepare:

- Cadres.
- Document types.
- Training institutions.
- Provinces and locations.
- Nursing Council pathways/forms/checklists.
- Repository root folders for General Registry, Nursing Council, and Medical Board.

4. Current Import Commands

Use the command that matches the source type:

```
.\.venv\Scripts\python.exe manage.py import_atp_workbook --path "path\to\2026 Current ATP-DATA
Statistics & Tracking latest.xlsx"
.\.venv\Scripts\python.exe manage.py import_ndata_workbook --path "path\to\nursing-ndata.xlsx"
.\.venv\Scripts\python.exe manage.py import_medical_board_workbook --path "path\to\medical-board.xlsx"
.\.venv\Scripts\python.exe manage.py import_full_registrations --path "path\to\full-registration.xlsx"
.\.venv\Scripts\python.exe manage.py import_provisional_licenses --path "path\to\provisional.xlsx"
.\.venv\Scripts\python.exe manage.py import_provisional_graduands --path "path\to\graduands.xlsx"
.\.venv\Scripts\python.exe manage.py import_workforce_files --path "path\to\folder"
.\.venv\Scripts\python.exe manage.py import_nursing_analytics_snapshot --path
"path\to\PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx" --activate
.\.venv\Scripts\python.exe manage.py import_nursing_catherine_licence_breakdown --licence-path
"path\to\PNG_Nursing_Council_Cleaned_Licence_Breakdown.xlsx" --cadre-path
"path\to\PNG_Nursing_Council_Cadre_Breakdown.xlsx"
.\.venv\Scripts\python.exe manage.py link_receipts_to_individual_records --review-unmatched
```

Use only the command intended for the dataset. Do not use a Nursing Council import command for Medical Board data.

The current active Nursing Council analytics source is

PNG_Nursing_Council_Integrated_Dashboard_Model.xlsx, generated on 27 May 2026, with 34,851 lifecycle records, 19,998 clean ATP records, 8,158 clean provisional records, 6,695 clean full-licence records, and an 87.0% data quality health score.

The latest Catherine workbook refresh completed on 29 May 2026 and processed 14,853 of 18,615 rows from

PNG_Nursing_Council_Cleaned_Licence_Breakdown.xlsx and

PNG_Nursing_Council_Cadre_Breakdown.xlsx. It should be treated as an analytics/import-alignment refresh unless a later workflow explicitly promotes rows into the legal registry.

5. Records Hub

Authorised users can review populated records from:

```
/records/
```

Use filters and search on large tables such as Applications and Receipts. Restricted users may not see Records Hub if their role does not allow CRUD or data-quality review.

For Nursing Professionals:

```
/records/nursingprofessional/
```

Authorised registrar users should see search, sorting, page length, pagination, View, Edit, and Add New controls. Use these controls for controlled record maintenance and corrections, not to bypass application review decisions.

6. CSV/Excel Folder Imports

For generic workforce file imports, place files in one folder and name each file using the expected model slug, for example:

- nursingprofessional.csv
- midwife.xlsx
- nurseaide.xlsx
- healthstudent.csv
- location.xlsx

Then run:

```
.\.venv\Scripts\python.exe manage.py import_workforce_files --path notebooks\csv_templates
```

7. Required Source Tracking

Every imported row should preserve:

- Source file.
- Source sheet.
- Source row.
- Import batch.
- Imported by user or command context.
- Import timestamp.
- Office scope.
- Record type.
- File hash where the source command supports it.
- Active snapshot flag where the source is an analytics snapshot.
- Raw payload/source lineage where the row is used for analytics drilldown.

This is needed so staff can explain where management statistics came from.

8. Data Quality After Import

After import, run:

```
.\.venv\Scripts\python.exe manage.py audit_missing_data --audit-import-rows --latest-batch
.\.venv\Scripts\python.exe manage.py audit_duplicate_records
.\.venv\Scripts\python.exe manage.py link_receipts_to_individual_records --review-unmatched
```

Review the results before generating reports.

Open the duplicate queue after each duplicate audit:

```
/dashboard/duplicate-reviews/
```

Use the table functions to search, sort, page through cases, inspect grouped source rows, then mark each case reviewed, merged, or reopened.

9. Date and Finance Checks

Flag suspicious values before publishing:

- Future years such as 2050.
- Expiry date before issue date.
- Payment date outside the source period.

- Missing receipt number.
- Missing amount.
- Duplicate receipt reference.
- Spreadsheet receipt totals mixed with manual receipt totals.

Finance must remain separated:

- Nursing Council finance: /dashboard/reports/financial/?office=nursing
- Medical Board finance: /dashboard/reports/financial/?office=medical

Receipt-owner matching rules:

- Link only high-confidence receipt matches to applications, practitioner records, analytics facts, or source rows.
- Do not link a receipt on name similarity alone when registration number, practitioner number, source row, amount, or date evidence conflicts.
- Put unlinked, duplicate, suspicious, or high-value receipts into review immediately.
- Keep the original receipt row and matching evidence for audit.

10. Institution and Facility Checks

Do not mix training institutions and health facilities.

Separate:

- Verified Nursing Council training schools.
- PNG health facilities.
- Overseas institutions.
- Overseas workplaces.
- Government facilities/institutions.
- Church facilities/institutions.
- Private facilities/institutions.
- Unknown or unverified source values.

For maps, store verified coordinates in MappedEntity records. Do not geocode every map page load. Use:

```
.\.venv\Scripts\python.exe manage.py geocode_mapped_entities --limit 100
```

or enter verified coordinates through admin/review screens.

11. OpenKM-Style Document Population

For scanned paper evidence:

- Scan the document.
- Upload it to the correct office-scoped repository or checklist.
- Add metadata.
- Link it to the practitioner, application, receipt, or source row where possible.
- Use OCR/extracted text to support search.
- Keep document versions instead of replacing evidence silently.
- Approve or reject the current version when it becomes controlled evidence.

Open repository search:

12. Reporting After Population

Reports must explain:

- Live people counts.
- Imported row counts.
- Receipt money totals.
- Source file and source month.
- Latest completed import.
- Latest live update.
- Remaining missing-data issues.
- Remaining duplicate-review issues.
- Active Nursing Council analytics snapshot source and generated date.
- Whether a figure comes from the legal registry, analytics snapshot, workbook import, or NHWA reporting layer.

Use the monthly analytics and financial forecast pages only after data-quality checks have been reviewed.

13. NHWA Population Rule

NHWA workbooks are populated from verified platform data for reporting and sign-off:

```
Registry / Analytics / Finance / Facilities  
-> NHWA workbook cells  
-> review and sign-off  
-> NHWA export/report
```

Do not use NHWA workbook values to overwrite registry records automatically. Uncertain fields should remain editable with audit logs and checklist sign-off.

OpenKM Project Timeline

OpenKM-Style Project Timeline

Project: PNG Nursing Council and Medical Board Online Regulatory Workforce Platform

Date: Updated 1 June 2026

1. Objective

Deliver OpenKM-style document management, records management, workflow control, search, audit, ICMS/discipline evidence handling, decision traceability, and governance inside the current regulatory platform without breaking Nursing Council and Medical Board operations.

This timeline is now written as the completed platform timeline plus the operational post-launch programme.

2. Delivery Method

Each phase followed this safe-release pattern:

- Inspect existing models, views, URLs, dashboards, reports, and role checks.
- Reuse existing architecture where possible.
- Add isolated modules only where the current system could not safely represent the feature.
- Preserve Nursing Council and Medical Board separation.
- Add or update database migrations.
- Add management commands for repeatable setup.
- Run system checks and targeted tests.
- Update documentation and user guidance.

3. Completed Timeline

Phase 1: Document Repository Foundation

Status: Completed and integrated

Delivered:

- `apps.documents` module.
- `DocumentFolder` model.
- `Document` model.
- `DocumentVersion` model.
- `DocumentAccessPolicy` model.
- `DocumentAuditEvent` model.
- `DocumentApproval` model.
- Office scopes: General Registry, Nursing Council, Medical Board.
- Bootstrap command: `bootstrap_document_repository`.
- Admin management for folders, documents, versions, access policies, and audit events.

Outcome:

- The system now has a central OpenKM-style repository integrated into staff screens.
- Nursing Council and Medical Board documents can be scoped separately.

- Documents can store metadata, official record flags, retention years, versions, extracted text, and audit events.
- Controlled document versions can be approved or rejected with notes and audit events.

Phase 2: OCR, Indexing, Search, and Duplicate Detection

Status: Completed and integrated

Delivered:

- Repository search route: /documents/search/.
- Search by title, description, metadata, original filename, and extracted text.
- OCR/extracted-text field available on document versions.
- SHA-256 checksum generation for uploaded document versions.
- Duplicate checksum grouping for repository search results.
- Reference extraction helper for receipt numbers, ATP numbers, registration numbers, practitioner numbers, licence numbers, and years.

Outcome:

- Staff can search repository records by normal document details and OCR text where available.
- Duplicate file detection is ready for scanned and uploaded documents.

Phase 3: Workflow and Staff Review Integration

Status: Completed and integrated

Delivered:

- Nursing Council pathway configuration service.
- Form pathway configuration for NC/G-style workflows.
- Checklist/document requirements connected to application review.
- Registrar approval and rejection workflows.
- Employer verification and deceased practitioner workflow tools.
- Staff inbox, chat, notification, and operational access request workflow.
- Notification history, unread badge clearing, and mailbox opened/read status.
- Reviewer access lock until approval by registrar or System Admin.
- Finance Officer restricted to read-only finance and workforce views.
- Linked repository evidence displayed on application detail review screens.

Outcome:

- Documents and records now sit inside controlled regulatory workflows rather than being treated as static downloads.
- Staff requests for operational access are visible to the registrar and System Admin.
- Registrar review can open repository evidence from the application detail screen.

Phase 4: Records Governance, Security, and Compliance

Status: Completed and integrated

Delivered:

- System Admin only restriction for /admin/.
- Nursing Council and Medical Board backend access separation.

- Finance forecast separation by office scope.
- Public register safe-field rules.
- Profile Overview role explanations.
- Export timestamp/user tracking for confidential outputs.
- Data-quality and duplicate-review workflow guidance.
- Duplicate Review Queue table functions and grouped source-row review.
- Records Hub table functions and authorised registrar CRUD actions for Nursing Professionals.
- Public registration role/cadre dropdown routing, including CHW provisional and CHW full-license separation.
- Board-specific dashboard welcome headers with PNG emblem identity.
- Repository official record and retention fields.
- Repository approval/rejection sign-off for controlled current versions.
- Formal ICMS complaint cases.
- Disciplinary case workflow and complaint escalation.
- Regulatory decision register.
- Nursing Council active analytics snapshot drilldowns.
- NHWA workbook reporting layer.
- Public FAQ, moderated forum, and mapped reference pages.
- Receipt-owner matching and unmatched review routing.

Outcome:

- The platform has the practical security and governance controls needed for controlled launch preparation.
- Sensitive records are not managed only through visible menu hiding; backend checks enforce access.

Phase 5: Documentation, Training, and Launch Readiness

Status: Completed documentation

Delivered:

- Updated documentation index.
- Updated role-based user guide and manual.
- Updated data-cleansing and import alignment plan.
- Updated OpenKM comparison and roadmap.
- New OpenKM-style completed-platform user guide.
- Management reporting standards for live counts, imported rows, payment rows, source dates, and data-quality limitations.

Outcome:

- Staff have a plain-language reference for system use, data governance, OpenKM-style document management, and reporting discipline.

4. Post-Launch Operational Timeline

Week 1: Staff Training and Account Confirmation

Tasks:

- Confirm all staff accounts and roles.

- Change testing passwords.
- Train registrars, finance, reviewers, data-quality officers, and System Admin.
- Demonstrate operational access request workflow.
- Demonstrate notification history and unread badge clearing.
- Demonstrate Records Hub and Duplicate Review Queue table functions.
- Demonstrate Nursing Council and Medical Board separation.
- Demonstrate ICMS case creation, enquiry escalation, discipline escalation, and regulatory decision recording.
- Demonstrate document approval and rejection.
- Demonstrate active Nursing Council analytics snapshot drilldown.

Week 2: Document Repository Pilot

Tasks:

- Scan a small set of current applications and receipts.
- Upload to correct office-scoped repository.
- Add metadata and document type.
- Link documents to application/practitioner records where applicable.
- Search using title, metadata, and extracted text.
- Confirm no cross-office leakage.
- Approve or reject a controlled version and confirm the audit event.

Week 3: Data Cleansing Sprint

Tasks:

- Run missing-data audit.
- Run duplicate audit.
- Review future date issues such as accidental 2050 dates.
- Normalize provinces, institutions, facilities, and sectors.
- Start ATP-to-employment alignment.
- Run receipt-owner linking and review unmatched or suspicious receipts.
- Verify mapped entity coordinates before public map demonstration.

Week 4: Finance and Reporting Validation

Tasks:

- Compare manual receipts with spreadsheet receipts.
- Confirm Nursing Council finance and Medical Board finance are separate.
- Generate monthly analytics.
- Generate financial forecast reports.
- Check export timestamps and exporting user.
- Confirm report explanations are clear for management.
- Populate NHWA workbook cells from verified data and confirm no write-back to registry records.

Week 5: Management Review

Tasks:

- Present current live statistics.
- Present remaining data-quality gaps.
- Present OpenKM-style repository process.
- Present privacy and role access model.
- Present ICMS, discipline, decision-register, and document sign-off controls.
- Confirm deployment readiness with NDOH ICT.

5. Success Criteria

The OpenKM-style implementation is successful when:

- Staff store official evidence in the correct office-scoped repository.
- Documents have metadata and versions where appropriate.
- Controlled documents are approved or rejected with notes.
- Scanned documents can be searched.
- Duplicate document checks identify repeated uploads.
- Registrar review uses checklist, payment, competency, and source evidence.
- Finance reports separate Nursing Council and Medical Board receipts.
- Public users cannot view private records.
- Reviewers cannot access high-risk tools until approved.
- Reports explain live people counts separately from imported row counts.
- Data-quality issues are reviewed before management statistics are published.
- Complaint, discipline, and decision evidence is captured in formal modules.
- Analytics snapshot records are distinguished from legal registry records.
- NHWA exports are reviewed and signed off before submission.

6. Governance Checkpoints

Review these monthly:

- Role access and approval requests.
- Nursing Council and Medical Board data separation.
- Open repository documents without metadata.
- Duplicate uploaded documents.
- Missing-data review backlog.
- Duplicate practitioner backlog.
- Finance date errors and suspicious receipt rows.
- Report source dates and latest import batch.
- Backup and restore readiness.
- User training needs.
- Complaint and discipline case backlog.
- Decision records missing authority/SOP references.

- Documents awaiting approval/rejection.
- NHTSA workbook sign-off readiness.
- Mapped entities without verified coordinates.

7. Current Position

The OpenKM-style system foundation is complete and integrated into the platform. The remaining work is operational adoption: scanning paper records, attaching legacy evidence, cleaning historical data, training users, verifying map coordinates, using ICMS/discipline/decision workflows consistently, confirming NDOH ICT hosting/security, and enforcing disciplined reporting practices.
